# Oxford: the right kit, ready for theatre.

A theatre supply model built around planned procedures - connecting procurement expertise, procedure-specific supplies and coordinated logistics. [1]

### THE PROCUREMENT CONTEXT

Oxford University Hospitals' published procurement set out a requirement for kitting and carting and managed equipment services across its four sites. [3]

### A PARTNERSHIP APPROACH

**Promedex · Elcom · Eleanor Hospital Logistics**

Together through Oxford Kitting and Carting. [1, 2]

## Two practical steps around the operating list.

### Kitting

Agreed consumables and disposable supplies are picked and checked against the requirements of the procedure and clinical team.

### Carting

Supplies are organised onto case carts for delivery to theatre, coordinated with the operating list and instrument availability.

# Built around requirements. Managed through review.

01

## Agree

Confirm the supplies needed for the procedure and clinical team.

02

## Kit

Pick and check the agreed items against those requirements.

03

## Cart

Organise case carts and coordinate delivery to theatre.

04

## Review

Review supply requirements and service performance.

# What the model is designed to improve

### Less searching

Reduce time spent finding and assembling supplies.

### Better coordination

Align theatre requirements, supplies and instrument availability.

### Clear accountability

Support a coordinated service through communication and review.

Explore a theatre service built around your organisation.
